Current Luxury App

Current Luxury smart phone app is available for iOS and Android devices, and works with all Zigbee and WiFi Current Luxury / Current Products Corporation devices. The app provides unparallelled control over devices by allowing users the ability to create groups, scenes, and schedules.

FAVORITES

Keep all your devices, groups, and schedules in one place. The favorited items will be in the “Favorites” tab. This is the default tab users see on launch.

DEVICES

Supports control for all Current Luxury / Current Products Corporation Zigbee and WiFi devices (Bridges not shown here). Users can add/pair new devices and bridges. The same button to add devices and bridges will also put the bridge into “pairing mode”, which will allow for Zigbee devices to be added to the bridge. Individual devices can be configured and edited by clicking on the device, where the user will be brought to the “Device Edit” page.

GROUPS

Groups can include Zigbee and WiFi devices, enabling simultaneous movement. Users can create new groups with each group being accessible from the “Groups” tab. Selecting a group opens the “Edit Group” page, where users can edit the group, add or remove devices, and delete the group.

SCHEDULES

Users can create and manage automated schedules for devices. Schedules enable users to set specific times for devices to move to preset positions. Additionally, users can manually trigger a schedule by clicking "Run Schedule," which immediately sets all devices to their defined positions. Schedules can be toggled ON/OFF, effectively switching between automated timing and manual preset modes. Users can only have 14 schedules at a time.

LOCATIONS

Supports multiple locations, each with its own set of devices, groups, and schedules. Users can switch between locations by selecting the location name at the top of the app bar. Clicking the location name opens the “Locations” tab, where users can add new locations or edit existing ones. This allows for easy management of devices across different homes or spaces.

SIDEBAR

- Zigbee Bridges: Displays any detected Zigbee bridges. Users can select a bridge to open the “Bridge Edit” page, where they can edit bridge settings, change its location, enable pairing mode, or delete the bridge.
- Account Settings: Allows users to manage their account details and preferences such as changing email, name, password and deleting the account.
- Help: Provides guidance on app features and troubleshooting tips.
- Contact Us: Offers support options for users to reach out for assistance.
- Log Out: Signs the user out of the app.
